

SALE: The sale will be held at the Dawes County Fairgrounds in Chadron, NE at 1:00 MST on Friday, December 5, 2025.

VIEWING: Bulls will be located at 215 Pineview just outside of Chadron. They will be penned for easy viewing from 9:00 – 11:30. Videos will be linked on the website prior to the opening day. Please check www.jadangus.com for additional announcements and information.

PARTICIPATION: Four options:

1. Come look through the cattle and make your selections. Then join us at the fairgrounds at 1:00 MST. You can offer your bid in person as we proceed through the sale order.
2. Notify us of which lots you are interested in, and we will call you when that lot is being sold. You can bid live via telephone.
3. Leave your order with Ann or I and we will have someone bid in your absence.
4. We will offer an online option to participate via Zoom. If you are interested you can sign up on our website and we will provide more information.

All bulls will be base priced at \$3500.

Whether you attend in person, are on the phone, online, or leave your bid; this sale is conducted in a straightforward, transparent manner. Bids are never misused in any way, and your trust is of utmost importance to us.

SEMEN INTEREST: John & Ann Dockweiler Angus will retain a semen interest in every bull selling.

DELIVERY: The first 150 miles is free, remainder at cost.

HEALTH: All bulls have passed a semen test. The non-virgin bulls have been tested free of trichomoniasis.

GUARANTEE: The cattle sell as they are. This is what I expect and prefer when I buy livestock, and this is what I'm offering to you. Evaluate the risk and buy them for what they are worth. With that said, if there is something inherently wrong with one of them, let me know and we will attempt to make it right on a case-by-case basis.

FOOD: Coffee and rolls at the pens in the morning and we are providing lunch at the fairgrounds prior to the sale.

LIABILITY: Anyone attending the sale does so at their own responsibility and risk, without liability on the part of the owners.

Welcome to our 2025 bull sale. Thank you for your interest in our program.

Whether you are looking for the first time or a repeat customer, we appreciate it and are thankful for your consideration.

BREEDING PHILOSOPHY

Fertility has been the primary driver of my selection. I didn't have to hear twice that fertility is significantly more valuable than growth or carcass traits. The difficulty was learning how to select for fertility. Some breeders cull every open cow and increase selection pressure by shortening the breeding season. There's certainly nothing wrong with that and over time if you're using your own bulls, fertility may increase.

Others have focused on environmental fitness, focusing on moderate size and increased capacity and thickness in order to improve condition scores and thereby improve pregnancy test results. There is certainly some truth to this as well. We all know that cows that are too big or that milk too much for their environment can struggle to maintain condition and get pregnant.

I have used both of the above strategies and have concluded that reducing fertility selection to a pass/fail pregnancy test makes improvement rate somewhere between slow and non-existent. And selecting for environmental fitness is necessary and helpful but is not directly related to inherent fertility. Further, knowing that 'obesity reciprocates infertility and vice versa', fleshing ability can become the enemy of inherent fertility.

After beating my head against the wall for a few years, I was introduced to Jan Bonsma. He wrote, among many other things, the following: "The highly fertile cow is of slender build compared to her sub fertile counterpart. Her neck and front portion are slim, and her coat is sleek. She carries not fat or coarse muscling; her shoulder blades are lean and loose. The cartilaginous ends of the shoulder blades can be seen to move freely above the highest points of the thoracic vertebrae."

Boom, he nailed it! He describes a conformational type that corresponds with inherent fertility. To fix a fertile type quickly, I used linebred parent stock and continued the refinement process through continued close breeding.

I haven't selected for performance, choosing instead to let those values find their own level according to our environment. I have included ratios for weaning and yearling weight in this catalog because we happened to collect them, but I don't find those numbers useful. They seem to be more indicative of heterozygosity than genetic growth and I prefer the more homozygous bulls as parents.

Currently, our herd is a tick more inbred than I prefer. This is likely an advantage for our customers as prepotency is commercially valuable. It does, however, increase our costs and is not something I want to overdo. Outside bulls alleviate inbreeding but are often quite disruptive to the characteristics I am selecting for. In order to preserve and improve what we have without disruption and without an increase in inbreeding, I am using a large number of our own yearling bulls one time and then offering them for sale. This helps to reduce costs and stabilize our current gene pool. Additionally, it mimics a near universal principle in nature whereby excess males compete to mate.

DEVELOPMENT

The bulls were weaned in November 2024. They were wintered on pasture with distillers and grass hay. I made the decision in late May of 2025 to send the bulls to a backgrounding lot, to save grass for the cows. They were placed on the grass cattle ration. They didn't gain much, mostly fought flies and each other, but it gave our grass a chance to get going. They came home July 21. I used 18 of them for our own breeding purposes. As of this writing, they have not caught up with the others in condition. Around October 1, they started receiving 4# of a Stocker Pellet and grass hay.

We look forward to hearing from and seeing many of you this time of year. You're welcome to come tour the cows and the ranch at any time. Let us know how we can assist you.

John Dockweiler
